The Air

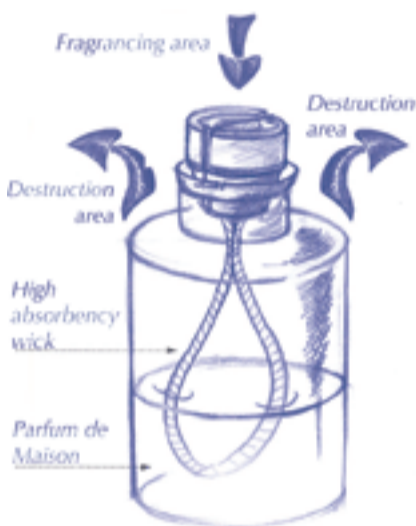

THE SECRET BEHIND

The whole secret of the Lampe Berger is encapsulated in the catalytic effect developed over 100 years ago by Maurice Berger, a pharmaceutical chemist.

The catalytic burner captures and destroys molecules that carry odors. The air is purified at a lower temperature zone, at the center of the burner. The mixing of the air and the movement from convection, due to the presence of hot points on the burner, ensure that odors are destroyed.

At least 68% of the bacteria found in a large volume of air are killed.

Where other products simply add perfume to cover unpleasant odors, the Lampe Berger actually purifies the atmosphere before perfuming it. Today, it is still the effectiveness and originality of this natural principle that ensures the success of the Lampe Berger in homes and offices around the world.

Efficiency proven in laboratory tests

INSTRUCTIONS FOR USE

- 1 Place your Lampe Berger on a stable surface, away from any source of heat. Remove the openwork shade and the cap.
 - 2 Fill your Lampe Berger 2/3 full with a Lampe Berger Parfum de Maison. Carefully wipe off any excess fluid from the lamp.
 - 3 Insert the wick fully into the neck of the Lampe Berger, and then check to make sure the burner is inserted. Place the cap on the neck and leave the wick to soak for approximately 20 minutes.
 - 4 Light the burner using a match or lighter. Allow the flame to burn for two minutes. Blow out the flame.
- Warning: Never place the openwork shade over the flame.
- 5 Your Lampe Berger is now operating. Never touch the burner during operation. Place the openwork shade over the burner. A burning time of 25 to 45 minutes is sufficient for a room of 300 square feet.
 - 6 To extinguish your Lampe Berger, remove the openwork shade and place the cap on the burner. Then place the openwork shade on the lamp.

Lampe Berger is in the air...
and that changes everything
